Title: KFF Poll: May 2024 Health Tracking Poll/Health Misinformation Tracking Poll

Survey Organizations: SSRS

Sponsors: KFF

Field Dates: April 23 - May 1, 2024

Sample: National adult

Sample Size: 1479

Interview Modes: Telephone Interview, Landline; Telephone Interview, Cell Phone; Web-based survey; Computer-Assisted telephone interview (CATI)

Weight Location: Columns 312-317 (x.xxxx) -- Varname: WEIGHT

Usage Notes: 278 (n=18 in Spanish) interviews were conducted from a random digit dial telephone sample of prepaid cell phone numbers obtained through MSG. Phone numbers used for the prepaid cell phone component were randomly generated from a cell phone sampling frame with disproportionate stratification aimed at reaching Hispanic and non-Hispanic Black respondents. The dataset contains more than one weight variable: WEIGHT is the weight for the overall sample (N=1,479). WEIGHT_RV is the weight for the subpopulation of registered voters (N=1,243). To look at only registered voters, use the weight WEIGHT_RV.

Please note that data provided by the Roper Center for Public Opinion Research may not be re-disseminated without written permission. The results of any analyses conducted on the data may, however, be published with appropriate acknowledgments and source citation.

METHODOLOGY

This *KFF Health Tracking Poll/Health Misinformation Tracking Poll* was designed and analyzed by public opinion researchers at KFF. The survey was conducted April 23-May 1, 2024, online and by telephone among a nationally representative sample of 1,479 U.S. adults in English (1,396) and in Spanish (83). The sample includes 1,201 adults (n=65 in Spanish) reached through the SSRS Opinion Panel either online (n=1,176) or over the phone (*n*=25). The SSRS Opinion Panel is a nationally representative probability-based panel where panel members are recruited randomly in one of two ways: (a) Through invitations mailed to respondents randomly sampled from an Address-Based Sample (ABS) provided by Marketing Systems Groups (MSG) through the U.S. Postal Service's Computerized Delivery Sequence (CDS); (b) from a dual-frame random digit dial (RDD) sample provided by MSG. For the online panel component, invitations were sent to panel members by email followed by up to three reminder emails.

Another 278 (*n*=18 in Spanish) interviews were conducted from a random digit dial telephone sample of prepaid cell phone numbers obtained through MSG. Phone numbers used for the prepaid cell phone component were randomly generated from a cell phone sampling frame with disproportionate stratification aimed at reaching Hispanic and non-Hispanic Black respondents. Stratification was based on incidence of the race/ethnicity groups within each frame.

Respondents in the phone samples received a $15 incentive via a check received by mail, and web respondents received a $5 electronic gift card incentive (some harder-to-reach groups received a $10 electronic gift card). In order to ensure data quality, cases were removed if they failed two or more quality checks: (1) attention check questions in the online version of the questionnaire, (2) had over 30% item non-response, or (3) had a length less than one quarter of the mean length by mode. Based on this criterion, two cases were removed.

The combined cell phone and panel samples were weighted to match the sample's demographics to the national U.S. adult population using data from the Census Bureau's 2023 Current Population Survey (CPS), September 2021 Volunteering and Civic Life Supplement data from the CPS, and the 2023 KFF Benchmarking survey with ABS and prepaid cell phone samples. The demographic variables included in weighting for the general population sample are sex, age, education, race/ethnicity, region, civic engagement, frequency of internet use, political party identification by race/ethnicity, and education. The sample of registered voters was weighted separately to match the U.S. registered voter population using parameters above plus recalled vote in the 2020 presidential election by county quintiles grouped by Trump vote share. Both weights account for differences in the probability of selection for each sample type (prepaid cell phone and panel). This includes adjustment for the sample design and geographic stratification of the cell phone sample, within household probability of selection, and the design of the panel-recruitment procedure.

The margin of sampling error including the design effect for the full sample is plus or minus 3 percentage points and is plus or minus 4 percentage points for registered voters. Numbers of respondents and margins of sampling error for key subgroups are shown in the table below. For results based on other subgroups, the margin of sampling error may be higher. Sample sizes and margins of sampling error for other subgroups are available by request. Sampling error is only one of many potential sources of error and there may be other unmeasured error in this or any other public opinion poll. KFF public opinion and survey research is a charter member of the Transparency Initiative of the American Association for Public Opinion Research.

Group	N (unweighted)	M.O.S.E.
Total	1,479	± 3 percentage points
Total registered voters	1,243	± 4 percentage points
Republican registered voters	372	± 7 percentage points
Democratic registered voters	417	± 6 percentage points
Independent registered voters	323	± 7 percentage points
Have ever used GLP-1 drugs		
Yes	189	± 9 percentage points
No	1,288	± 4 percentage points
TikTok use		
TikTok users	677	± 5 percentage points

Notes for reading the topline:

- Percentages may not always add up to 100 percent due to rounding.
- Values less than 0.5 percent are indicated by an asterisk (*).
- "Vol." indicates a response was volunteered by the respondent, not offered as an explicit choice.
- Questions are presented in the order asked; question numbers may not be sequential.
- No answer includes those who said 'Don't know' or refused to answer the question on the phone and those who skipped the question on the web.
- Question wording shown is for web mode; for some questions phone wording varied slightly.

Trended data prior to July 2022 were conducted using RDD methods. See footnotes for changes in question wording, and answer options when applicable. See previous methodology statements for differences in methodology for trended data.

All trends shown in this document come from KFF Health Tracking except:
12/19: KFF Abortion Knowledge and Attitudes Poll (December 20-30, 2019)
6/23: KFF Health Misinformation Tracking Poll Pilot (May 23-June 12, 2023)

Contact Information

Background

SSRS is a leading full-service, public opinion research firm. For more than 30 years, SSRS has specialized in healthcare, public and social policy, and non-partisan political research studies conducted via all data collection modes. Our clients are comprised of public and private sector entities including major academic institutions, leading national media organizations, and top research institutes (www.ssrs.com).

SSRS Opinion Panel

The SSRS Opinion Panel is a nationally representative probability-based panel of U.S. adults age 18 or older. The hallmarks of the SSRS Opinion Panel are methodological rigor, accuracy, affordability, mode flexibility, and representativeness. Our panel is actively used by major academic institutions, media organizations, and other private sector entities – both in the U.S. and abroad.

As a charter member of the AAPOR (American Association for Public Opinion Research) Transparency Initiative, SSRS is committed to full compliance of AAPOR standards and transparency.

SSRS Opinion Panel Team and Services

Our highly experienced SSRS Opinion Panel team stands ready to support both data collection and client analytic needs. We work closely with clients from the early project planning stages to developing and delivering effective customized solutions. Our services include questionnaire design, questionnaire programming and hosting, user experience (UX) testing, cognitive interviews, data collection, statistical weighting, and data analysis and reporting. Specific SSRS Opinion Panel services include:

- Questionnaire design consultation that meets industry best practices.
- Methodological consultation.
- Highly collaborative team that works closely in meeting client schedules.
- Design and implementation of subpopulation-specific surveys that leverage panelist profile data, such as for surveys of Hispanics, people with specific health insurance statuses, caregivers, parents, registered voters, and people with different chronic health conditions.
- Establishment and maintenance of custom proprietary panels.

Panel Recruitment

SSRS Opinion Panel members are recruited randomly based primarily on nationally representative Address Based Sample (ABS) design. ABS sample is drawn from the Delivery Sequence File (DSF) maintained by the U.S. Postal Service. Population coverage of the DSF is in the 98%-99% range. Additional panelists are recruited via random digit dial (RDD) telephone sample of prepaid cell phone numbers. Phone numbers used for the prepaid cell phone component are randomly generated from a cell phone sampling frame.

During the recruitment process, full demographic information on panelists is collected. This data is stored securely and used to determine eligibility for specific studies (if needed). We also rely on these data to improve the survey experience for panelists by avoiding the need to re-ask demographic questions with each survey.

How are SSRS Opinion Panel Surveys Conducted?

The SSRS Opinion Panel is a multi-mode panel. Most panelists take self-administered web surveys; however, the option to take surveys conducted by a live telephone interviewer is available to those who prefer to complete surveys by phone and/or who do not use the Internet. SSRS's own research suggests that more than 9 in 10 non-internet panelists would prefer to take surveys over the phone rather than be provided an internet-enabled device to take web surveys.[1] SSRS has therefore made the decision not to provide internet access to non-internet respondents as doing so does not effectively address the coverage bias of non-internet respondents.

The SSRS Opinion Panel is multi-mode (web and phone) and bilingual (English and Spanish)

Samples are drawn among panel members to best meet the study criteria. We use a probability proportional to size (PPS) sampling methodology to draw samples that are representative of the target population with respect to key demographics, attitudes, and behaviors. Selected panelists are sent an email invitation to participate in the survey, including unique survey link. The link allows the respondent to complete the self-administered online survey. Our contact protocol also includes a text message reminder for panelists that have consented to receiving text messages. All telephone interviews are conducted using a CATI (Computer Assisted Telephone Interviewing) system with live interviewers.

[1] Berta, K., Gumbs, J., Schmidt, J., Turakhia, C. "Comparing Non-internet and Web-reluctant Panelists" Presented at 2023 AAPOR Conference.

Weighting

SSRS Opinion Panel data is weighted to be representative of the entire residential adult population in the United States. The first step in the weighting process is the application of a base weight that accounts for the sample design at the recruitment and study levels. For studies that opt to have no telephone component, we then apply a proprietary model-based non-internet propensity adjustment so that results are representative of all adults and not just those who have access to the internet. Following the base weight, the panel is calibrated to correct for differential participation along demographics such as age, race, sex, region, and education. Benchmark distributions are obtained from the most recently available data from sources such as the Current Population Survey (CPS), the American Community Survey (ACS), the Pew Research Center's National Public Opinion Reference Survey (NPORS), and the Aristotle Registered Voter Database. Additionally, online panelists are known to be more civically engaged than the general population. To correct for this potential bias, we include volunteerism and interaction with neighbors in panel calibration. These benchmark distributions are derived from the Civic Engagement and Volunteer Supplement to the Current Population Survey.

How is the SSRS Opinion Panel an improvement over opt-in Online Panels?

Most recent research suggests that probability samples provide the most accurate data. Surveys that utilize a probability sample combined with an opt-in sample are less accurate than surveys of full probability samples. Least accurate are surveys comprised entirely of opt-in panel sample. The SSRS Opinion Panel is a fully probability-based panel because it recruits randomly selected panelists from probability-based sample sources that reflect the U.S. adult population (ABS and RDD prepaid cell). Results obtained from this panel can statistically represent a target population with a known margin of error.

Unlike typical opt-in panels, no one can "volunteer" to be part of the SSRS Opinion Panel. They must be selected randomly and invited to participate. By employing rigorous sampling methods, we not only reduce the risk of selection bias but also minimize susceptibility to "bots" or fraudulent panelists. This additional layer of security enhances the reliability of our survey results.

SSRS Opinion Panel Standard Deliverables

SSRS Opinion Panel standard deliverables include a weighted SPSS data file (with standard demographic variables) and an AAPOR compliant methods statement (with response rate calculations) provided after completion of all data collection and weighting. Upon request, we can also provide access to an online dashboard that provides near real-time project updates during data collection.

In addition to standard deliverables, our deliverables and other offered services are fully customizable to client needs.

SSRS Opinion Panel Demographics

A battery of demographic and other questions is asked during the recruitment of panelists. These questions are stored securely and kept for identifying target respondents, used for weighting, and can be appended to study data to expand what is known about respondents. Demographics are typically not re-asked for every survey unless there is reason to believe that the data could have changed in a meaningful way. Available demographics are provided in the table below.

Standard Profile Variables^

Age
Gender
Education
Race/Ethnicity
Employment Status
Marital Status
Party Identification
Political Ideology
Voter Registration
Income
Home Ownership
Internet Use Frequency
Household Size/Composition
Parental Status
Region (U.S. Census – 4 category)
Division (U.S. Census – 9 category)
State
Metro Status
DMA (Designated Market Area)

^Included in standard deliverables.

Custom Profile Variables*

Religion
Health Insurance Type
Disability/Handicap
Sexual Orientation
Detailed Hispanic Nativity
Work role/Purchasing power
Employer Size
Retirement Savings Type
Age of Children
Active Duty/Armed Forces Status
Gun Ownership
Internet Type
Zip code
Social Media Usage

*Available for an additional cost

SSRS ESOMAR 37

Company Profile

1. What experience does your company have in providing online samples for market research? How long have you been providing this service? Do you also provide similar services for other uses such as direct marketing? If so, what proportion of your work is for market research?

SSRS is a leading full-service, non-partisan public opinion research firm. For more than 30 years, SSRS has specialized in healthcare, public and social policy, and non-partisan political research studies conducted via all data collection modes. Our clients are comprised of various public and private sector entities including major academic institutions, leading national media organizations, and top research institutes.

Founded in 2016, the SSRS Opinion Panel is a probability-based nationally representative panel of U.S. adults ages 18 or older. The hallmarks of the SSRS Opinion Panel are methodological rigor, accuracy, affordability, mode flexibility, and representativeness. Our panel is actively used by major academic institutions, media organizations, and other private sector entities – both in the U.S. and abroad.

Our panel is strictly used for research purposes and gathering public opinion. It is not used for direct marketing.

As a charter member of the AAPOR (American Association for Public Opinion Research) Transparency Initiative, SSRS is committed to full compliance of AAPOR standards and transparency.

2. Do you have staff with responsibility for developing and monitoring the performance of the sampling algorithms and related automated functions who also have knowledge and experience in this area? What sort of training in sampling techniques do you provide to your frontline staff?

The SSRS Opinion Panel team is comprised of industry experts with deep knowledge of probability-based sampling techniques. The Panel team works closely with SSRS methodologists to develop and optimize sampling strategies, which are then automated using the Forsta+ (formerly known as Confirmit) platform. In addition, the Panel team oversees sample releases for every project

1 Braxton Way Suite 125 | Glen Mills, PA 19342
ssrs.com | @ssrs_research

conducted using the SSRS Opinion Panel and works with frontline project staff to ensure studies are executed to specification.

3. What other services do you offer? Do you cover sample-only, or do you offer a broad range of data collection and analysis services?

The SSRS Opinion Panel is a full-service platform and offers a broad range of data collection and analytic services. This includes, but is not limited to, full-service custom surveys, sample-only endeavors, and projects that utilize a hybrid probability/non-probability approach.

Sample Sources and Recruitment

4. Using the broad classifications above, from what sources of online sample do you derive participants?

SSRS Opinion Panel members are recruited randomly based on a nationally representative Address Based Sample (ABS) design (including Hawaii and Alaska). Address-based samples are drawn from the Delivery Sequence File (DSF) maintained by the U.S. Postal Service. Population coverage of the DSF is 98%-99%. Prior to 2022, we recruited a portion of our panel, including hard-to-reach populations, via RDD methodology.

5. Which of these sources are proprietary or exclusive and what is the percent share of each in the total sample provided to a buyer? (Assume proprietary to mean that the sample provider owns the asset. Assume exclusive to mean that the sample provider has an exclusive agreement to manage/provide access to sample originally collected by another entity.)

100% of sample from the SSRS Opinion Panel is proprietary and exclusive to SSRS. All recruited SSRS Opinion Panelists are wholly owned by SSRS.

6. What recruitment channels are you using for each of the sources you have described? Is the recruitment process 'open to all' or by invitation only? Are you using probabilistic methods? Are you using affiliate networks and referral programs and in what proportions? How does your use of these channels vary by geography?

The SSRS Opinion Panel consists entirely of sample recruited based on probabilistic methods. Recruitment is strictly by invitation only. As of 2022, all panel members are recruited via Address Based Sample (ABS). ABS respondents are randomly sampled by Marketing Systems Group

1 Braxton Way Suite 125 | Glen Mills, PA 19342
ssrs.com | @ssrs_research

(MSG) through the U.S. Postal Service's Computerized Delivery Sequence File (DSF), a regularly updated listing of all known addresses in the U.S. For the SSRS Opinion Panel, known business addresses are excluded from the sample frame. Prior to 2022, we recruited a portion of our panel, including hard-to-reach populations, via RDD methodology.

7. What form of validation do you use in recruitment to ensure that participants are real, unique, and are who they say they are? Describe this both in terms of the practical steps you take within your own organisation and the technologies you are using. Please try to be as specific and quantify as much as you can.

SSRS generates unique survey passwords that are assigned and provided via mail to the randomly selected households. The recruitment survey can only be accessed using their unique passwords. In addition, at the start of every recruitment survey, respondents are asked to verify they live at the sampled address and are terminated if they indicate they live elsewhere. Panelists who join via web are asked to provide their email address and must complete a double opt-in process to confirm their email is correct and working.
One of our de-duplication mechanisms is RelevantID, a digital fingerprint technology that prevents duplicate respondents from completing the survey. Please note that SSRS may use other de-duplication technology solutions at its discretion.

8. What brand (domain) and/or app are you using with proprietary sources? Summarize, by source, the proportion of sample accessing surveys by mobile app, email or other specified means.

SSRS uses Forsta+ (formerly known as Confirmit) software and data warehousing solution for the SSRS Opinion Panel. Forsta+ is the world's leading provider of survey and reporting software. Forsta+ is a sophisticated web-based data collection tool with capabilities to deliver tailored, fully branded, and highly structured surveys for all types of feedback and market research programs. SSRS utilizes Forsta+ for survey design and reporting, as well as for phone, web, and SMS data collection. Web programs are optimized for administration via smartphone or other mobile handheld devices. In our experience, more than half of SSRS Opinion Panel web surveys are completed on a smartphone or other mobile device.

SSRS leverages Forsta+ to invite panelists to surveys via email or SMS (if consenting) and contact telephone panelists via outbound dialing conducted by professional interviewers.

9. Which model(s) do you offer to deliver sample? Managed service, self-serve, or API integration?

1 Braxton Way Suite 125 | Glen Mills, PA 19342
ssrs.com | @ssrs_research

The SSRS Opinion Panel only provides sample as a managed service.

10. If offering intercepts, or providing access to more than one source, what level of transparency do you offer over the composition of your sample (sample sources, sample providers included in the blend). Do you let buyers control which sources of sample to include in their projects, and if so, how? Do you have any integration mechanisms with third-party sources offered?

The SSRS Opinion Panel does not offer intercepts. The SSRS Opinion Panel consists entirely of sample recruited based on probabilistic methods.

11. Of the sample sources you have available, how would you describe the suitability of each for different research applications? For example, Is there sample suitable for product testing or other recruit/recall situations where the buyer may need to go back again to the same sample? Is the sample suitable for shorter or longer questionnaires? For mobile-only or desktop-only questionnaires? Is it suitable to recruit for communities? For online focus groups?

The hallmarks of probability-based sample are methodological rigor, accuracy, mode flexibility, and representativeness. As such, SSRS Opinion Panel sample is suitable for a wide variety of research applications, methodologies, and survey lengths. We have the ability to target various populations of interest based on panel demographics for research studies. Panelists can be recontacted for multiple surveys for tracking studies. All web surveys are programmed with a responsive layout that ensures surveys are optimized for administration on both desktop and mobile devices.

Panelists may also be recruited for online focus groups. SSRS reserves the right to review any survey topics that are overly sensitive in nature or that require collection of personally identifiable information (PII).

Sampling and Project Management

12. Briefly describe your overall process from invitation to survey completion. What steps do you take to achieve a sample that "looks like" the target population? What demographic quota controls, if any, do you recommend?

The SSRS Opinion Panel leverages probability proportional to size (PPS) sampling to select probability samples from the Panel that are representative of the target population. The entire SSRS Opinion Panel is first weighted to demographic benchmarks for the U.S. adult population with

1 Braxton Way Suite 125 | Glen Mills, PA 19342
ssrs.com | @ssrs_research

respect to gender, age, educational attainment, race/ethnicity, Census division, civic engagement, population density, Internet use frequency, voter registration status, party identification, religion, household size, and home tenure. The Panel is then broken into strata defined by quantiles of this weight. A random sample is then selected within each stratum, with higher-weight strata having a higher selection probability. Depending on the target population and study goals, additional stratification variables and/or quota controls may be implemented. Final data is then weighted to population benchmarks to be representative of the target population.

13. What profiling information do you hold on at least 80% of your panel members plus any intercepts known to you through prior contact? How does this differ by the sources you offer? How often is each of those data points updated? Can you supply these data points as appends to the data set? Do you collect this profiling information directly or is it supplied by a third party?

As a part of enrollment process, a variety of socio-demographic and household composition information is collected and saved as part of the panelist profile. This information is collected consistently from all respondents who enroll in the panel. A full list of available demographics can be found at https://ssrs.com/opinion-panel/. Key demographics are regularly updated.

14. What information do you need about a project in order to provide an estimate of feasibility? What, if anything, do you do to give upper or lower boundaries around these estimates?

In order to provide accurate cost and feasibility, it is most helpful to receive the following information at the proposal stage: Target population group(s), incidence rates, sample size, survey length and complexity, subject matter of research, Spanish language requirement, project timeline, and any special requirements or deliverables such as inclusion of video and graphics, open-end coding, data tabulation, questionnaire design support, and data analysis support. The Panel team can use a combination of expected incidence, historical response rate, and panel composition to determine feasibility.

15. What do you do if the project proves impossible for you to complete in field? Do you inform the sample buyer as to who you would use to complete the project? In such circumstances, how do you maintain and certify third party sources/sub-contractors?

As a charter member of AAPOR's (American Association for Public Opinion Research) Transparency Initiative, SSRS is committed to full transparency with our clients and the general

1 Braxton Way Suite 125 | Glen Mills, PA 19342
ssrs.com | @ssrs_research

public. In the event we need to supplement our panel with sample from other providers, SSRS discloses this upfront to the client.

We have strategic relationships with high-quality sample providers. Our technology infrastructure supports use of sample from multiple partners without duplication.

16. Do you employ a survey router or any yield management techniques? If yes, please describe how you go about allocating participants to surveys. How are potential participants asked to participate in a study? Please specify how this is done for each of the sources you offer.

SSRS does not use survey routers for the SSRS Opinion Panel.

17. Do you set limits on the amount of time a participant can be in the router before they qualify for a survey?

SSRS does not use survey routers for the SSRS Opinion Panel.

18. What information about a project is given to potential participants before they choose whether to take the survey or not? How does this differ by the sources you offer?

Panelists are not told any specific information about the subject of a survey prior to participating in order to preserve independence of research and reduce non-response bias. In the invitations, panelists are told the value of the incentive they will receive for completing the survey and are typically given a due date.

19. Do you allow participants to choose a survey from a selection of available surveys? If so, what are they told about each survey that helps them to make that choice?

No, panelists are never given the option to choose from a selection of available surveys. Each survey invitation includes a unique link to a single survey.

20. What ability do you have to increase (or decrease) incentives being offered to potential participants (or sub-groups of participants) during the course of a survey? If so, can this be flagged at the participant level in the dataset?

All panelists who qualify for and complete the survey via web are offered a post-participation compensation in the form of an electronic gift card, sent via email immediately after completion of the survey. They have the option of redeeming their rewards as a cash equivalent gift card (such as

1 Braxton Way Suite 125 | Glen Mills, PA 19342
ssrs.com | @ssrs_research

a Visa gift card) or as a gift card for one of many online or in-store retailers. All respondents who complete the survey via telephone are offered post-participation compensation via a mailed check.

Hard-to-reach population groups are typically offered a higher compensation. The Panel team will often make a recommendation for a higher compensation for longer survey lengths. Incentives values can be adjusted during the survey field period if needed.

We can provide participant-level compensation payout data as a special service.

21. Do you measure participant satisfaction at the individual project level? If so, can you provide normative data for similar projects (by length, by type, by subject, by target group)?

All survey-specific respondent communication contains contact information for the SSRS Opinion Panel manager. We carefully review survey-specific respondent feedback and take necessary action promptly in the event an anomaly is detected. In addition, we also ask survey-specific respondent satisfaction questions for our internal quality control. We can insert participation satisfaction questions as designed by the client and provide this data to the client.

22. Do you provide a debrief report about a project after it has completed? If yes, can you provide an example?

As a charter member of AAPOR's (American Association for Public Opinion Research) Transparency Initiative, SSRS reporting is fully compliant with AAPOR's transparency standards. After completion of the study, in addition to a fully labeled data file with demographic weights, SSRS provides a methods report containing detailed information about design, sampling, AAPOR response rate calculations, weighting, and data processing. This report can also contain various performance metrics, including but not limited to margin of error, design effect, survey start rate, survey completion rate, drop-out rate, and overall length of interview.

Data Quality and Validation

23. How often can the same individual participate in a survey? How does this vary across your sample sources? What is the mean and maximum amount of time a person may have already been taking surveys before they entered this survey? How do you manage this?

The SSRS Opinion Panel is a relatively low burden panel in that our panelists generally do not receive more than 2 to 3 surveys per month. This keeps the engagement level and data quality high.

1 Braxton Way Suite 125 | Glen Mills, PA 19342
ssrs.com | @ssrs_research

As an additional measure, we maintain a 24 hour lock out, so that a panelist cannot be invited to more than 1 survey per day.

24. What data do you maintain on individual participants such as recent participation history, date(s) of entry, source/channel, etc? Are you able to supply buyers with a project analysis of such individual level data? Are you able to append such data points to your participant records?

SSRS maintains individual participation data including participation rate, number of surveys completed, dates of completed surveys, and registration date. We analyze and use this data for panel management purposes. This data is not a part of our standard deliverables. We can provide aggregated data as a custom service.

25. Please describe your procedures for confirmation of participant identity at the project level. Please describe these procedures as they are implemented at the point of entry to a survey or router.

Our probability-based recruitment methods ensure that only respondents with a confirmed identity are invited into the panel. In addition, we implement an email double opt-in methodology at the panel registration stage for web panelists to confirm respondent identity. For web surveys, invitations are sent to the unique email address provided by respondents at the time of registration. All email invitations are addressed to the panelists by name and contain a unique survey link. For telephone surveys, interviewers ask for the member of the panel by name and are trained not to conduct interviews with anyone else in the household who may be willing.

26. How do you manage source consistency and blend at the project level? With regard to trackers, how do you ensure that the nature and composition of sample sources remain the same over time? Do you have reports on blends and sources that can be provided to buyers? Can source be appended to the participant data records?

The SSRS Opinion Panel consists entirely of sample recruited based on probabilistic methods and is therefore treated as a singular source. For tracking studies, we make sure each wave of sample is similar in demographic composition with minimized respondent duplication across waves.

27. Please describe your participant/member quality tracking, along with any health metrics you maintain on members/participants, and how those metrics are used to invite, track, quarantine, and block people from entering the platform, router, or a survey. What processes do you have in place to compare profiled and known data to in-survey responses?

1 Braxton Way Suite 125 | Glen Mills, PA 19342
ssrs.com | @ssrs_research

SSRS maintains individual participation data including participation rate. The SSRS Opinion Panel regularly tracks panel health and reviews the panel database annually for chronic non-responders (i.e. those who joined the panel but have never completed a survey despite multiple invitations). Chronic non-responders are given a final opportunity to confirm their membership with an engagement survey. Those who do not respond to the engagement survey are excluded from future sampling. We also systematically replenish the panel to account for panel attrition over time.

Upon request, SSRS may program questions into a survey that can compare profiled and known data to in-survey responses.

28. For work where you program, host, and deliver the survey data, what processes do you have in place to reduce or eliminate undesired in-survey behaviours, such as (a) random responding, (b) Illogical or inconsistent responding, (c) overuse of item non-response (e.g.,"Don't Know") (d) inaccurate or inconsistent responding, (e) incomplete responding, or (f) too rapid survey completion?

For web surveys, quality checks are incorporated into the survey itself. Respondents who fail the quality checks are not included in the final dataset. These quality control measures include checks for speeders, high non-response, and the administration of trap questions to check for consistent responses and attentiveness. Additional quality control measures may be included depending on the scope of the project.

For telephone surveys, interviews are closely monitored by interviewing staff for quality control. In addition, randomly sampled recordings are reviewed by supervisors to monitor quality and interviewer procedures.

Policies and Compliance

29. Please provide the link to your participant privacy notice (sometimes referred to as a privacy policy) as well as a summary of the key concepts it addresses.

The SSRS Opinion Panel Privacy Policy is available at https://ssrsopinionpanel.com/privacy/.

30. How do you comply with key data protection laws and regulations that apply in the various jurisdictions in which you operate? How do you address requirements regarding consent or other legal bases for the processing personal data? How do you address requirements for data breach response, cross-border transfer, and data retention? Have you appointed a data protection officer?

1 Braxton Way Suite 125 | Glen Mills, PA 19342
ssrs.com | @ssrs_research

Survey response data provided to clients by the SSRS Opinion Panel is anonymized and contains no PII, except in cases where the respondent has given explicit permission to share personally identifiable information.

As a company, SSRS is ISO/IEC 27001:2013 certified. ISO/IEC 27001:2013 is an international standard on how organizations are to handle information security. SSRS holds certificate number IS 743297 and operates an Information Security Management System which complies with ISO/IEC 270001:2013 for the following scope: The information Security Management System for the management of the processes necessary to securely deliver Public Opinion and Market Research to clients in accordance with the Statement of Applicability version 4.0 dated 05/18/2022. Our certificate issued by BSI is valid until 06/24/2024.

The SSRS Opinion Panel stores its database in Forsta+ (formerly known as Confirmit) software. For decades, Forsta+ has maintained one of the highest levels of security in our industry, allowing them to earn the trust of the most demanding companies, and meet their stringent security and privacy requirements. Forsta+'s operations undergo an annual comprehensive SOC 2 Type II (SSAE 18 / AT 101) examination by a highly reputable AICPA accredited firm. Their SaaS production environment, where client data is stored and processed, is ISO 27001 certified, SOC 2 Type II audited and PCI-DSS certified.

In addition to the comprehensive third-party SOC 2 Type II audits of their operations, Forsta+ performs a battery of additional testing to ensure the effectiveness of their security posture. These include weekly penetration testing by information security team which are validated by annual third-party penetration tests by independent security professionals (McAfee). Forsta+also performs static code-scanning of the software, which is validated by third-party white-hat application testing performed by highly trained cyber-security professionals (Veracode). Forsta+has always completed the third-party testing with the highest security grade available, "A".

Forsta+'s full security features can be reviewed here:
https://extranet.confirmit.com/Extranet/media/PublicDocuments/SaaS/Confirmit_Horizons_SaaS_Security-January_2019.pdf

SSRS IT department handles all data protection issues.

31. How can participants provide, manage and revise consent for the processing of their personal data? What support channels do you provide for participants?

1 Braxton Way Suite 125 | Glen Mills, PA 19342
ssrs.com | @ssrs_research

All panelists have the ability to opt-out of the panel by contacting the panel manager. Contact information for the panel manager is provided in every invitation survey and within every survey.

32. How do you track and comply with other applicable laws and regulations, such as those that might impact the incentives paid to participants?

SSRS Opinion Panel is fully compliant with all applicable laws in the United States including incentives paid to participants. SSRS is compliant with all regulations set forth by our incentive vendors.

33. What is your approach to collecting and processing the personal data of children and young people? Do you adhere to standards and guidelines provided by ESOMAR or GRBN member associations? How do you comply with applicable data protection laws and regulations?

The SSRS Opinion Panel only accepts panelists age 18 or older. In the event that a project seeks to survey the child of an adult panelists, SSRS will first get consent from the responsible adult then ask the child for their agreement. The responsible adult will be told the name and contact details of the research organization, the nature of the data to be collected, the purpose of collecting the data, how the data will be used, and benefits or potential impact of the research.

34. Do you implement "data protection by design"(sometimes referred to as "privacy by design") in your systems and processes? If so, please describe how.

Our internal systems and processes have all been certified as ISO 27001 compliant. This includes system security, file access/handling, storage, credential management, vulnerability testing, etc.

35. What are the key elements of your information security compliance program? Please specify the framework(s) or auditing procedure(s) you comply with or certify to. Does your program include an asset-based risk assessment and internal audit process?

As a company, SSRS is ISO/IEC 27001:2013 certified. ISO 27001 includes a risk assessment process, organizational structure, Information classification, Access control mechanisms, physical and technical safeguards, Information security policies, procedures, monitoring, and reporting guidelines.

36. Do you certify to or comply with a quality framework such as ISO 20252?

1 Braxton Way Suite 125 | Glen Mills, PA 19342
ssrs.com | @ssrs_research

As a company, SSRS is ISO/IEC 27001:2013 certified. ISO/IEC 27001:2013 is an international standard on how organizations are to handle information security. SSRS holds certificate number IS 743297 and operates an Information Security Management System which complies with ISO/IEC 270001:2013 for the following scope: The information Security Management System for the management of the processes necessary to securely deliver Public Opinion and Market Research to clients in accordance with the Statement of Applicability version 4.0 dated 05/18/2022. Our certificate issued by BSI is valid until 06/24/2024.
Metrics

37. Which of the following are you able to provide to buyers, in aggregate and by country and source? Please include a link or attach a file of a sample report for each of the metrics you use.

01. Average qualifying or completion rate, trended by month.
02. Percent of paid completes rejected per month/project, trended by month.
03. Percent of members/accounts removed/quarantined, trended by month
04. Percent of paid completes from 0-3 months tenure, trended by month
05. Percent of paid completes from smartphones, trended by month
06. Percent of paid completes from owned/branded member relationships versus intercept participants, trended by month
07. Average number of dispositions (survey attempts, screenouts, and completes) per member, trended by month (potentially by cohort)
08. Average number of paid completes per member, trended by month (potentially by cohort)
09. Active unique participants in the last 30 days
10. Active unique 18-24 male participants in the last 30 days
11. Maximum feasibility in a specific country with nat rep quotas, seven days in field, 100% incidence, 10-minute interview
12. Percent of quotas that reached full quota at time of delivery, trended by month

The SSRS Opinion Panel is U.S. only and comes from a single probability-based source. We can provide some aggregate data that we use for tracking panel health. This will be handled as a special request on a study-by-study basis.

TOTAL	1280					

Race /Ethnicity Targets

Overall Targets		PP
Hispanic	235	150
AA	175	100
TOTAL	405	250

GLOBAL PROGRAMMING NOTES:

PROGRAMMER NOTES: THROUGHOUT

- Respondents should be allowed to skip every question after the screener (should be allowed at AGE).
- Do not allow skips at Age2. At these questions, respondents should see EM1 once when they try to skip. Do not allow web blank to be entered a second time.
- Any time a question is skipped at the following questions (AGE,HISPANIC, RACE, VAXANY), program should show EM1 "Your answers to these questions are very important to us. Can you please take a moment to respond to the question below?" and notate where EM1 is shown.
- Aside from Age2- If respondent still skips after seeing the error message, they should be allowed to skip and continue with the survey.
- Also show at specified questions throughout questionnaire (see DP notes at questions), and record when EM1 is shown.
- We will need to calculate an overall response rate (i.e., the number of questions answered / the number of questions a respondent was asked). Ideally, we would like this for telephone too, making a "Don't know" or "Refused" response option a "not answered/Web blank" response.
- The body of the page (question area) should be WHITE
- Footer – light grey background – smaller text font – should contain the following information:
- Question text should be in larger font than response options
- Question numbers will be removed before going live.
- Preferred fonts –-Helvetica, or Verdana
- Do not display "No answer" or "Web blank" categories.
- Each question should be displayed on a new screen unless otherwise noted.
- All trend notes should be in curly brackets and in italics {new}. Please identify any trend question with the name of the project, month, and year – for example {CVM, January 2022}
- All questions with rotate/randomization variable notations MUST have the variable recorded in the dataset. This is standard.
- "ROTATE" instruction when want to flip the order to 2 response options or items or a set of response options or items to flip in order (for example 1-4/4-1). If have a multi-item list then "RANDOMIZE" instruction (e.g. RANDOMIZE ITEMS A-G)
- Multi-item questions will be programmed as one-item per page and that is generally the KFF preference. If question to be displayed as a grid, it will include a programming note (SHOW AS GRID IF WEB).
- Response options will use numbers (1, 2,3…) followed by a tab. "Don't know" should be code 8 or 98, "Refused" should be 9 or 99, and "Web blank" should be 10 or 100, depending on the number of responses options.
- For response item –on the web - all items should begin with lower-case letters if they will be inserted in the middle of a question stem on the web.
- For yes/no questions, "or not" should be used for the CATI version. If so, it should be formatted as follows: (IF MODE=CATI: , or not)
- No progress bar.
- Allow respondents to [1] finish the survey at a later time, and [2] resume the survey where they left off. Include a "Finish Later" navigation button.

- Navigation buttons are labeled “Back”, “Finish Later” and “Next”. Back button should be on the left, Finish Later button in the middle, and Next button should be on the right.
- For questions with “other-specify” options, allow respondents to select “Other” without forcing a response to be typed in the specify text box.
- If question or response text is in bold, italics, or underlined, please do the same in the online survey.
- Include variables in the data for:
    - All randomizations and rotates.
    - Overall LENGTH, measured in minutes, carried out to at least two decimal places.
    - Start date.
    - End date (if applicable).
    - Start Device type (device on which the respondent is began the survey).
    - End Device type (device on which the respondent finished the survey).
    - Browser type.
    - Number of times the respondent entered the survey.
    - All variables from the sample file (if applicable).
    - Data quality daily reports needed:
- LOI Report: Include all cases with a length of interview of < 10 minutes (< 50% of the expected average length- 20 minutes). Please run report in Excel.
- Nonresponse Rate Report. Please calculate the completion rate of all questions for all respondents
    - Codes 8,9,10,98,99,100 (don’t know, refused, web blank) are all nonresponse
    - Nonresponse rate = # questions with nonresponse / Total # questions
    - Include in nonresponse rate report if nonresponse rate < 30%.
    - Please run report in Excel.
- Trap Question Report: based on quality control blocks
- Total Data Quality Report
    - Include all completes in this report
    - For each case, show LOI, item nonresponse rate, and list the trap questions that the respondent failed.
    - Please run this report in excel.

(ASK IF USERDATA=50; IF WEB PROB PANEL SAMPLE)
WEB Thank you for your interest. We are conducting an important national study. The findings of this study will be in the news in the coming weeks. If you qualify for and complete the survey, we will offer you a $[INSERT AMOUNT] reward to thank you for completing this survey.

The survey should only take about 20 minutes. The information you give will be kept confidential andwill not be linked to your name.

You can skip any question you do not wish to answer.

Please read each question carefully.

Do not use your browser's back button to go back to previous questions. Instead, use the “>>” button on each web page to move through the survey. If you are unable to answer a particular question, you may select ">>” to advance to the next question.

To continue with the survey, please click “Next”

Thank you for your help with this important study.

(ROTATE ITEMS IN PARENS 1-2/2-1; INCLUDE ROTATE IN DATA FILE)
{March 2023 tracking}
Q11. Under the 2010 health care law, MOST states have expanded their Medicaid program to cover more low-income people. For states that expand their Medicaid program, the federal government pays for at least 90 percent of the costs of this expansion with the state paying the rest. Do you think your state should (keep Medicaid as it is today) or (expand Medicaid to cover more low-income uninsured people)?

1 Keep Medicaid as it is today
2 Expand Medicaid to cover more low-income uninsured people
8 IF MODE=CATI: (DO NOT READ) Don't know
9 IF MODE=CATI: (DO NOT READ) Refused
10 IF MODE=WEB: Web blank

(ASK ALL)
(ROTATE 1-2; RECORD ROTATE VARIABLE IN DATA; KEEP "OPTION A" AND "OPTION B" FROM ROTATING)
{2024 Medicaid unwinding, modified base}
Q12. Which of these two descriptions comes closer to your view of what Medicaid should look like in the future?

(IF MODE=CATI: READ LIST)

1 **OPTION A:** Medicaid should largely continue as it is today, with the federal government guaranteeing coverage for low-income people, setting standards for who states cover and what benefits people get, and matching state Medicaid spending as the number of people on the program goes up or down.
2 **OPTION B:** Medicaid should be changed so that instead of matching state Medicaid spending and setting certain requirements for health coverage, the federal government limits how much it gives states to help pay for Medicaid and states have greater flexibility to decide which groups of people to cover without federal guarantees.

(ASK ALL)
{*new*}
Q20. As you may know, some Medicare (HOVER OVER "Medicare" IF WEB/CATI IF NEEDED: Medicare is the federal government health insurance program for adults 65 and older and for some younger adults with disabilities) plans currently cover the cost of some of these drugs when prescribed for diabetes or heart disease, but Medicare does **not** cover these or any other drugs when prescribed for weight loss. Do you think Medicare should cover the cost of these drugs when prescribed for weight loss for people who are overweight?

(IF MODE=CATI READ IF NECESSARY: *These drugs refer to a class of prescription drugs that are used for weight loss and to treat diabetes or to reduce heart disease risk. These include drugs like Ozempic (IF CATI: oh-zem-pick), Wegovy (IF CATI: wee-goh-vee), Mounjaro (IF CATI: mown-JAHR-oh), Zepbound, Rybelsus (IF CAT: ruh-BELL-suhs), Trulicity, Semaglutide (IF CAT: sem-AH-gloo-tide), and others. These drugs are sometimes referred to as GLP-1 agonists (IF CATI: a-guh-nists).)*

1 Yes, Medicare should cover the cost
2 No, Medicare should not cover the cost
8 IF MODE=CATI: (DO NOT READ) Don't know
9 IF MODE=CATI: (DO NOT READ) Refused
10 IF MODE=WEB: WEB BLANK

{new}
Q21. Some people say that if Medicare covers the cost of these drugs, it could increase premiums paid by people with Medicare and place financial pressure on the Medicare program and the federal budget. Others say that if Medicare covers the cost of these drugs, it could help more people afford these medications and improve health and quality of life for people who are overweight.

After hearing these arguments, do you now think Medicare should cover the cost of these drugs when prescribed for weight loss for people who are overweight?

(IF MODE=CATI READ IF NECESSARY: *These drugs refer to a class of prescription drugs that are used for weight loss and to treat diabetes or to reduce heart disease risk. These include drugs like Ozempic (IF CATI: oh-zem-pick), Wegovy (IF CATI: wee-goh-vee), Mounjaro (IF CATI: mown-JAHR-oh), Zepbound, Rybelsus (IF CAT: ruh-BELL-suhs), Trulicity, Semaglutide (IF CAT: sem-AH-gloo-tide), and others. These drugs are sometimes referred to as GLP-1 agonists (IF CATI: a-guh-nists).)*
