This Washington Post-Schar School Deciders poll was conducted April 15 to May 30, 2024, among a stratified random sample of 3,513 registered voters in Arizona, Georgia, Michigan, Nevada, Pennsylvania and Wisconsin. Results for the overall sample of voters in key states have a margin of sampling error of plus or minus 2.0 percentage points.

A subset of 2,255 voters were classified as "Deciders" if they turned out in only one of the last two presidential elections, are ages 18 to 25, registered to vote since 2022, did not definitely plan to vote for Biden or Trump this year or switched support for party candidates between 2016 and 2020. The error margin for results among Deciders is plus or minus 2.5 points. Questions 14-43 are based on a sample of 3,370 voters and 2,159 Deciders, with error margins of +/- 2.0 and 2.6 points, respectively.

The sample was drawn from the L2 database of registered voters in each state; all selected voters were mailed an invitation to take the survey online, with additional contact efforts from live-caller interviewers, text message and email. The survey's overall response rate was 8.5 percentage points (AAPOR RR3).

Sample design, field work, data processing and weighting were conducted by SSRS of Glen Mills, PA.

(Full methodological details and sampling error margins for subgroups are at the end of this document.)

This poll was jointly sponsored and funded by The Washington Post and George Mason University's Schar School of Policy and Government. The poll is a stratified random

sample of 3,513 registered voters in Arizona, Georgia, Michigan, Nevada, Pennsylvania and Wisconsin.

This questionnaire was administered with the exact questions in the exact order as they appear in this document. Demographic questions are not shown; a summary of sample demographics for each state is in the table above. Phrases surrounded by parentheticals within questions indicate clauses that were randomly rotated for respondents.
The poll employed registration-based sampling, drawing a stratified random sample was drawn from the L2 database of registered voters in each state. The sample was stratified by state, past turnout, ethnicity, age, and rural status to ensure adequate representation of each demographic group.

All selected voters were sent a letter inviting them to participate with a $1 cash enclosed and invited to take the survey online or by phone, with a $10 offered for completing the survey. Additional contact attempts were made by live phone operators, email, text message and postcards. In total, 3,388 respondents completed the survey online and 125 by phone. The overall response rate for the survey was 8.5 percent (AAPOR RR3).

Data collection was conducted in two phases. In Phase 1, the survey was conducted with 25 percent of the sample. Following a review of the Phase 1 sample performance in representing target demographic groups, Phase 2 sample design was reassessed to make sure all the various demographic sample targets were reached.

This poll used statistical weighting procedures to ensure the sample is representative and accounts for differential rates of survey participation. The first weighting step adjusts for probability of selection and non-response levels across different types of voters. The second weighting step aligns the survey sample with the population benchmarks for registered voters in each state listed below. Each state sample was

given equal weight in the overall survey sample.

The 143 respondents who did not complete the entire survey but finished a sufficient portion of the survey to be weighted were included in results through Question 13; a single weight was used for the entire sample as results for presidential support did not differ for the subset of 3,370 completed interviews when weighted separately.

All error margins have been adjusted to account for the survey's design effect, which is 1.5 for this survey. The design effect is a factor that takes into account decreases in precision due to sample design and weighting procedures.

Study Note

The 143 respondents who did not complete the entire survey but finished a sufficient portion of the survey to be weighted were included in results through Question 13; a single weight was used for the entire sample as results for presidential support did not differ for the subset of 3,370 completed interviews when weighted separately.

STANDARD GLOBAL PROGRAMMING NOTES:

- Allow all devices, including desktops, laptops, tablets, and mobile devices
    - Allow multiple browsers and operating systems
    - Will have study branding (and unique domain)
- Display question numbers/letters for testing purposes only. Do not display the section headers, question numbers/letters, or other question labels for the live respondent survey.
- Force response vs. allowable skips: Allow all questions to be skipped
- Do not display “Web blank" categories unless otherwise specified.
- Each question should be displayed on a new screen unless otherwise noted.
- Use a back button – See below for further instructions.
- No progress bar
- Survey offered in English and Spanish
- Allow respondents to [1] finish the survey at a later time, and [2] resume the survey where they left off.
- Wording for finish later page: ***“Your responses are important to us. We hope that you'll come back later and finish the survey. When you wish to resume, return to the link you were provided, and it will take you to the last question you answered.”***
- Grids:
    - Do not program list questions as grids unless otherwise specified.
    - IF SPECIFIED TO PROGRAM AS GRID:
        - For questions with multiple items, set up the question as a grid, with items down the left side and response options across the top from left to right.
        - HTML tables should be programmed in a way that column widths are set as proportions of the screen size. This will allow content to adjust to different browser window sizes.
        - The table should be centered and be flexible to take up 90% of the browser width, with the size determined in percent to maintain the relative column width.
        - Response columns should be of equal width.
        - Grids should not display table lines. Instead, rows for items should be shaded in a color that matches the design theme, and alternate between shaded row and non-shaded row.
- For questions with “other-specify” options, allow respondents to select “Other” without forcing a response to be typed in the specify text box.
- If question or response text is in bold, italics, or underlined, please do the same in the online survey.
- Include variables in the data for:
    - All randomizations and rotates.
    - Overall LENGTH, measured in minutes, carried out to at least two decimal places.
    - Length of sections based on “start timer” and “end timer” instructions in questionnaire
    - Start date.
    - End date (if applicable).
    - Start Device type (device on which the respondent is began the survey).
    - End Device type (device on which the respondent finished the survey).
    - Browser type.
    - Number of times the respondent entered the survey.
    - All variables from the sample file.

- Allow respondents to skip questions – Do not force responses, unless otherwise indicated. After skipping a question, respondents should be taken to the next question they are eligible to receive, unless otherwise specified.
- Code any skipped questions for a question that a respondent saw as a "999 Decline/Web Blank".
- Error Messages for skipped questions: In general, respondents should be able to skip any question. However, we would like an error message to show up for respondents:
- Every time a question is skipped;
- For questions with "other-specify" options and the respondent left the OS text box blank.
- The following error message should be shown above the skipped question: ***"Your answers to these questions are very important to us. Can you please take a moment to review your responses below for completion?"***
    - The respondent should be allowed to skip the question after this message is shown; they should NOT be required to answer the question before moving on after the error message conditions outlined above are met.
