Study Design & Documentation

Introduction

Ipsos Public Affairs (Ipsos) conducted the 2024 Annual Survey on behalf of The Chicago Council on Global Affairs. The study examines American's attitudes and perceptions of a range of US and International public policy issues.

Sample Definition, Field Period and Survey Length

The survey was conducted on KnowledgePanel®, the largest online panel in the United States that relies on probability-based sampling methods for recruitment to provide a representative sampling frame for adults in the U.S. The target population was comprised of non-institutionalized adults age 18 and older residing in the United States.

Ipsos invited one adult from a representative sample of households to partake in this survey. Selected panel members received an email invitation to complete the survey and were asked to do so at their earliest convenience. The subject and body of the email invitation sent is shown in Appendix A.

The survey was administered to both English and Spanish survey-takers and consisted of two stages: A pretest followed by a main survey. The main survey sample release consisted of a soft launch followed by a full launch. The final programmed English and Spanish instruments are shown in Appendices B1 (English) and B2 (Spanish).

The median completion time of the main survey was 25 minutes. Upon completion, qualified respondents received an entry into the KnowledgePanel sweepstakes for completing a longer survey.

The completion and qualification rates for the pretest and main surveys are presented below.

	Field Start	Field End	N Fielded	N Completed	Completion Rate	N Qualified	Qualification Rate
Pretest	06/06/2024	06/14/2024	500	154	30.8%	154	100%
Main	06/21/2024	07/01/2024	3,661	2,204	60.2%	2,204	100%

Data Processing to Ensure Data Quality

Respondents are unable to complete the survey more than once; after completing the survey one time, respondents no longer have access to the survey.

Ipsos did not code any open-ended responses. Data were imputed for demographics used in weighting if the respondent declined to answer. Ipsos did not conduct any additional data imputation for the 2024 Annual Survey.

Of the 2,204 cases completing the main survey, 2,106 cases were determined to be valid cases to be included in the final analyses. The 98 cases were excluded due to client provided data cleaning criteria.

Cases were excluded if they failed one of the following three criterions:

1. **Speedsters:** Respondents who completed the survey in 8 minutes or less.
    - Total cases removed: n=55

2. **Refused 50% or more of questions:** Respondents who refused to answer 50% or more of the eligible survey questions.
    - Total cases removed: n=59; n=43 unique to criteria group

3. **Data Check Score of 3 of 4:** Respondents who failed 3 or 4 of the quality checks implemented (see criteria below).
    - Total cases removed: n=13; n=0 unique to criteria group

    1. Completed survey faster than 8 minutes.
        - Total cases failing check: n=55
    2. Did not accurately input a "4", refused or skipped Question Q3_1 in the survey which, was designed to make sure respondents were paying attention to the survey. ("In order to make sure that your browser is working correctly, please select number 4 from the below list.").
        - Total cases failing check: n=54
    3. Refused one or more full battery of 5 attributes or more (Q2F, Q131, Q5, Q7, Q8, Q25, Q30, Q451S, Q40, Q491, Q44, Q86, Q325, Q257, QTW2, QVOTEISSUE).
        - Total cases failing check: n=253
    4. Respondents who straight lined their responses to a battery of grid questions (Q131, Q44, Q325, QVOTEISSUE).
        - Total cases failing check: n=521

Limitations of the Design and Data Collection

All forms of public opinion research are subject to unmeasured error that cannot be eliminated. When a probability-based panel like KnowledgePanel is used, Ipsos employs the total survey error approach to identify and minimize error due to coverage error, sampling error, nonresponse error, measurement error, and data processing and editing error. Coverage error is addressed in our KnowledgePanel recruitment strategies. Sampling error is addressed in recruitment and at the time of sample selection for each study. Nonresponse error is reduced in recruitment, study sampling, panel management strategies (including communication, incentive, and retention protocols), and weighting of the final data. These strategies support the computation of sampling error to estimate the extent to which the results from the sample might differ from population values. To reduce measurement error, our research staff evaluates questionnaires in terms of item flow, wording, and response formats to provide respondent-

friendly surveys and elicit high-quality data. Additionally, we conduct a quality control review of data processing steps and any data cleaning to minimize errors.

Survey Cooperation Enhancements

As standard with KnowledgePanel surveys, email reminders were sent to non-responders on Day 3 of the field period. An additional reminder was sent to the remaining non-responders on Day 7 of the field period. The subject and body of the email reminders are shown in Appendix A.

Data File Deliverables and Descriptions

For each survey, Ipsos prepared and delivered fully-formatted SPSS datasets containing the survey and demographic data with the appropriate variable and value labels. The table below shows the Main survey files delivered:

Delivery Date	File Type	File Name	File Size	N Records
07/11/2024	SPSS SAV	24-035894-01_Chicago Council_2024 Annual Survey_Main_Data File_07112024.sav	3.0 Mb	2,106

In addition, Ipsos prepared and delivered other deliverables as follows:

- Post-stratification statistical weights
- Demographic profile data for all qualified respondents
- Additional non-demographic profile data for all qualified respondents:

Ipsos KnowledgePanel® Methodology

Introduction

Ipsos is passionate about social science, health, and public policy research. We collaborate closely with our clients throughout the research process, while applying rigor in every step. We specialize in innovative online research that consistently gives leaders in academia, government, and business the confidence to make important decisions. Ipsos delivers affordable, statistically valid online research through KnowledgePanel® and leverages a variety of other assets, such as world-class advanced analytics, an industry-leading physician panel, an innovative platform for measuring online ad effectiveness, and a research-ready behavioral database of frequent supermarket and drug store shoppers.

KnowledgePanel is the first and most established online research panel that is representative of the entire U.S. population. Panel members are randomly recruited through probability-based sampling, and households are provided with access to the Internet and hardware if needed.

Ipsos recruits panel members using address-based sampling (ABS) methods to ensure full coverage of all households in the nation. Once household members are recruited for the panel and assigned to a study sample, they are notified by email for survey taking, or panelists can visit their online member page for survey taking (instead of being contacted by telephone or postal mail). This allows surveys to be fielded quickly and economically. In addition, this approach reduces the burden placed on respondents, since email notification is less intrusive than telephone calls and the self-administered mode minimizes social desirability bias and positivity effects that can be present with an interviewer. Many respondents find answering online questionnaires more interesting and engaging than being questioned by a telephone interviewer. Furthermore, respondents have the convenience to choose what day and time to complete their assigned survey.

Ipsos Public Affairs

Ipsos Public Affairs has a strong tradition in working with sophisticated academic, government, and commercial researchers to provide high quality research, samples, and analyses. The larger Ipsos offers the fundamental knowledge governmental agencies, academics, industries, retailers, services companies and the media need to provide exceptional quality in research to make effective decisions. It delivers a comprehensive range of information and consultancy services. Ipsos is one of the leading survey research organizations worldwide, operating in 90 countries with over 16,000 employees.

KnowledgePanel Methodology

KnowledgePanel provides probability-based samples with an “organic” representation of the study population for measurement of public opinions, attitudes, and behaviors. The panel was first developed in 1999 by Knowledge Networks, an Ipsos company. Panel members are randomly selected so that survey results can properly represent the U.S. population with a

measurable level of accuracy and a calculable response rate, features that are not obtainable from nonprobability or opt-in online panels (for comparisons of results from probability versus nonprobability methods, see MacInnis et al., 2018[1] and Yeager et al., 2011[2]).

KnowledgePanel's recruitment process was originally based exclusively on a national RDD sampling methodology. In 2009, in light of the growing proportion of cellphone-only households, Ipsos migrated to an ABS recruitment methodology via the U.S. Postal Service's Delivery Sequence File (DSF)[3]. ABS not only improves population coverage, but also provides a more effective means for recruiting hard-to-reach individuals, such as cellphone-only households, non-internet households, young adults, and persons of color. Households without an internet connection are provided with a web-enabled device and free internet service.

After initially accepting the invitation to join the panel, participants are asked to complete a short demographic survey (the initial Core Profile Survey); answers to this survey allow efficient panel sampling and weighting for future surveys. Upon completing the Core Profile Survey, participants become active panel members. All panel members are provided privacy and confidentiality protections.

Adults from sampled households are invited to join KnowledgePanel through a series of mailings, including an initial invitation letter, a reminder postcard, and a subsequent follow-up letter. Moreover, telephone refusal-conversion calls are made to nonresponding households for which a telephone number could be matched to a physical address. Invited households can join the panel by:

- Completing and mailing back a paper form in a postage-paid envelope
- Calling a toll-free hotline phone number maintained by Ipsos
- Going to a designated Ipsos website and completing the recruitment form online

KnowledgePanel Latino[SM] Recruitment

In 2008, KnowledgePanel Latino[SM] was developed to provide researchers with the capability to conduct representative online surveys with United States Hispanics, including both English and Spanish-dominant Hispanics. With the advent of KnowledgePanel Latino, the first United States online panel representative of Hispanics was established to include those without Internet access and those who only speak Spanish. Hispanic members recruited through our traditional ABS sampling methodology described above are supplemented with recruitment using a custom dual-frame RDD sampling methodology targeting telephone exchanges associated with census blocks that have a 65% or greater Latino population density (this density level covers

just over 50% of the United States Hispanic population). Moreover, cellular numbers from rates centers with high concentration of Hispanics are also used to improve the representation of samples. With this telephone recruitment, households are screened in the Spanish language to only recruit those homes where Spanish is spoken at least half the time.

Household Member Recruitment

During the initial recruitment survey, all household members are enumerated. Following enumeration, attempts are made to recruit every household member who is at least 13 years old to participate in KnowledgePanel surveys. For household members aged 13 to 17, consent is collected from the parents or the legal guardian during the initial recruitment interview. No direct communication with teenagers is attempted before obtaining parental consent.

Survey Sampling from KnowledgePanel

Once panel members are recruited and profiled by completing our Core Profile Survey, they become eligible for selection for client surveys. Typically, specific survey samples are based on an equal probability selection method (EPSEM) for general population surveys. Customized stratified random sampling based on "profile" data can also be implemented as required by the study design. Profile data can also be used when a survey calls for pre-screening—that is, members are drawn from a subsample of the panel, such as females, Republicans, grocery shoppers, etc. (This can reduce screening costs, particularly for lower incidence subgroups.) In such cases, we ensure that all subsequent survey samples drawn that week are selected in such a way as to result in a sample that remains representative of the population distributions.

As detailed above, significant resources and infrastructure are devoted to the recruitment process for KnowledgePanel so that our active panel members can properly represent the adult population of the U.S. This representation is achieved not only with respect to a broad set of geodemographic indicators, but also for hard-to-reach adults (such as those without Internet access or Spanish-language-dominant Hispanics) who are recruited in proper proportions. Consequently, the raw distribution of KnowledgePanel mirrors that of the U.S. adults fairly closely, barring occasional disparities that emerge for certain subgroups due to differential recruitment and attrition.

For selection of general population samples from KnowledgePanel, a patented methodology has been developed such that samples from the panel behave as EPSEM samples. Briefly, this methodology starts by weighting the pool of active members to the geodemographic benchmarks secured from a combination of the U.S. Census Bureau's American Community Survey (ACS) and the latest March supplement of the U.S. Census Bureau's Current Population Survey (CPS) along several dimensions. Typically, the geodemographic dimensions used for weighting the entire KnowledgePanel include the following dimensions, with additional nesting of dimensions as well:

- Gender (Male, Female)
- Age (18–29, 30–44, 45–59, and 60+)

- Race/Hispanic Ethnicity (White/Non-Hispanic, Black/Non-Hispanic, Other or 2+ Races/Non-Hispanic, Hispanic)
- Education (Less than High School, High School, Some College, Bachelor and beyond)
- Census Region (Northeast, Midwest, South, West)
- Household Income (Under $10k, $10K to <$25k, $25K to <$50k, $50K to <$75k, $75K to <$100k, $100K to <$150k, and $150K+)
- Home Ownership Status (Own, Rent/Other)
- Household Size (1, 2, 3, 4+)
- Marital Status (Married, Not Married)
- Metropolitan Area (Yes, No)
- Hispanic Origin (Mexican, Puerto Rican, Cuban, Other, Non-Hispanic)
- Language Dominance (non-Hispanic and English Dominant, Bilingual, and Spanish Dominant Hispanic) when survey is administered in both English and Spanish

Using the resulting weights as measures of size, a probability-proportional-to-size (PPS) procedure is used to select study specific samples. It is the application of this PPS methodology with the imposed size measures that produces demographically balanced and representative samples that behave as EPSEM. Moreover, in instances where a study design requires any form of oversampling of certain subgroups, such departures from an EPSEM design are accounted for by adjusting the design weights in reference to the Census benchmarks for the population of interest.

Survey Administration

Once assigned to a survey, members receive a notification email letting them know there is a new survey available for them to complete. This email notification contains a link that sends them to the survey. No login name or password is required. The field period depends on the client's needs and can range anywhere from a few hours to several weeks.

Typically, after three days, automatic email reminders are sent to all non-responding panel members in the sample. Additional email reminders are sent and custom reminder schedules are set up as needed. To assist panel members with their survey taking, each individual has a personalized member portal listing all assigned surveys that have yet to be completed.

Ipsos also operates an ongoing modest incentive program to encourage participation and create member loyalty. The incentive program includes special raffles and sweepstakes with both cash rewards and other prizes to be won. On average, panel members complete three to four surveys per month with durations of about 10 to 15 minutes per survey. An additional incentive is usually provided for longer surveys.

Response Rates

As a member of the American Association of Public Opinion Research (AAPOR), Ipsos follows the AAPOR standards for response rate reporting. While the AAPOR standards were established

for single survey administrations and not for multi-stage panel surveys, we use the Callegaro-DiSogra (2008)[4] algorithms for calculating KnowledgePanel survey response rates.

Ipsos KnowledgePanel Weighting

Study-Specific Post-Stratification Weights

Once all survey data have been collected and processed, design weights are adjusted to account for any differential nonresponse that may have occurred. Depending on the specific target population for a given study, geodemographic distributions for the corresponding population are obtained from the CPS, the U.S. Census Bureau's American Community Survey (ACS), or in certain instances from the weighted KnowledgePanel profile data. For this purpose, an iterative proportional fitting (raking) procedure is used to produce the final weights. In the final step, calculated weights are examined to identify and, if necessary, trim outliers at the extreme upper and lower tails of the weight distribution. The resulting weights are then scaled to aggregate to the total sample size of all eligible respondents.

For this study, the following benchmark distributions of U.S. adults age 18 and over from the March 2023 Current Population Survey (CPS) Supplement Data (with language proficiency coming from the 2022 American Community Survey (ACS) data) were used for the raking adjustment of weights:

- Gender (Male, Female) by Age (18-29, 30-44, 45-59, 60+)
- Race/Ethnicity (White/Non-Hispanic, Black/Non-Hispanic, Other/Non-Hispanic, Hispanic, 2+ Races/Non-Hispanic)
- Census Region (Northeast, Midwest, South, West) by Metropolitan Status (Metro, Non-Metro)
- Education (Less than High School, High School, Some College, Bachelor or higher)
- Household Income (under $25K, $25-$49,999, $50K-$74,999, $75K-$99,999, $100K-$149,999, $150K and over)
- Language Dominance (English Dominant Hispanic, Bilingual Hispanic, Spanish Dominant Hispanic, Non-Hispanic)

The weights (*weight)* were scaled to match the total study sample size (n=2,106).

Design Effect and Margin of Sampling Error[5]

Technically a margin of sampling error (MOSE) is survey- and estimate-specific. It is affected by the survey estimate (point estimate, proportion, mean, etc.), the number of cases, and the unequal weighting effect (often called a design effect). Here we provide the MOSE at the 95% confidence level for a point estimate equal to 50% (when the MOSE is at its widest) and when all respondents are accounted for.

KNOWLEDGEPANEL® | OVERVIEW

Be Sure with KnowledgePanel®

Ensuring accuracy with an industry leading representative random sample, exceptional response rates and coverage

KnowledgePanel has been at the forefront of conducting online research for more than two decades. Backed by scientific design, statistical rigor and sector expertise, it provides consistently high-quality measurement.

KnowledgePanel is the largest probability-based online panel in the U.S.—with about 55,000 members. Our research capability spans all industries from public health to commercial services and products. We have the most experienced analysts and online panel research team in the industry. And, with thousands of profile variables, we can reach all with the cost benefit of online survey administration without sacrificing accuracy.

With address-based sampling (ABS), KnowledgePanel provides a statistically valid representation of the U.S. population as well as many difficult-to-survey populations:

- cellphone-only households
- African Americans
- Latinos
- young adults (ages 15+)

Rigorous design, superior coverage, panel size and sound methodology make KnowledgePanel® the most suitable choice for a broad range of commercial, academic, and governmental applications.

The key design advantages of KnowledgePanel

- **We address self-selection bias by choosing respondents.** Our efficient sample design uses a single sampling frame: the Delivery Sequence File (DSF) of the United States Postal Service, covering almost 100% of the U.S. population.
- **We address participant fatigue by ensuring minimal survey burden.** Panelists take on average two KnowledgePanel surveys a month, minimizing respondent fatigue and attrition. Our research has highlighted a stark difference in the burden on KnowledgePanel members compared to opt-in participants:

Panel Hygiene

Number of surveys in a typical month from all sources:

We would like to think about surveys you take online over the internet. About how many ONLINE surveys would you estimate that you complete in a typical month?

	KP Members	Opt-in
Mean	7.25	26.8
Median	5	15

About 80+ percent of KP members only belong to KnowledgePanel. The same stat of solo panel membership for Opt-in samples is at 33.

- **We address mode bias.** Mixed-mode effects have been found with dual-mode online and telephone methods. KnowledgePanel provides non-internet households with a netbook and internet service to enable a single mode of data collection. The example below highlights the impact of mode on the responses of similar demographic groups:

Question		Telephone	Online
Do you favor or oppose providing a legal way for illegal immigrants already in the country to become citizen?	Strongly favor	33.3*	20.3
	Somewhat favor	31.8	34.5
	Somewhat oppose	11.5	24.1
	Strongly oppose	23.4	21.1

**significant difference by mode at 95% confidence*

- **We address coverage bias.** We provide coverage of hard-to-reach populations such as Hispanics across all acculturation levels, minority young adults, low income households, populations with low educational attainment, youth and pre-teens.

- **We address coverage of U.S. Hispanics.** You no longer need to rely on expensive and problematic methods when conducting Hispanic research. KnowledgePanel Latino[SM] has reinvented research to meet the needs of the online survey age without sacrificing population representation and the sound sampling principles you expect. We uniquely cover about 93% of U.S. Latino households. This encompasses Spanish- and English-dominant and bilingual households alike, as well as U.S. Latinos who do not have access to the internet at least occasionally.
- **We address non-response bias.** We lead the online research industry in terms of the proportion of the respondent pool that actually participates in our research. This is partly the result of our efforts to "convert" non-responders.
- **We can calibrate.** KnowledgePanel Calibration[SM] meets the needs of studies involving either exceptionally large sample sizes or the targeting of very small sub-populations/local geographies. This blended web sample approach is an effective methodology when compared to conducting the survey exclusively with non-probability opt-in panels. When calibrated, the combined sample sources—KnowledgePanel and opt-in online samples—result in higher accuracy over the use of an opt-in sample alone.

We know our panelists. We maintain an extensive, multi-year database of more than 2,000 profile variables based on survey respondents. Updated annually, the database is used to identify unique subgroups that are otherwise unattainable online. With the breadth of Ipsos KnowledgePanel profiles, we are able to:

- target the specific survey respondents you need, so that you don't need to waste valuable time in your custom survey
- integrate analytic value from profile packages—this might include, but is not limited to, information about political affairs, lifestyle, media, shopping habits, financial views, technological sophistication and more
- create custom panels based on collected characteristics, behaviors and attitudes of Ipsos KnowledgePanel members, eliminating the cost of newly recruiting a panel

Ipsos expertise applied

We believe that the true value to you of working with our company lies in the knowledge of our people and having their know-how and creativity, motivation and commitment applied to your needs. KnowledgePanel alone cannot tell a story, provide actionable recommendations or create the best survey or sample design to find them either, but Ipsos' experts can. Our team members combine and apply their industry experience and specialist knowledge to every project—so you can be assured you'll not only receive the best survey/sample design but the best insight on which to act too.

Understanding the public sector

Ipsos KnowledgePanel is the trusted source of relevant public opinion information that enables its clients to make smarter decisions. Our experts combine their passion with Ipsos' long-standing data science experience. This allows us to deliver vital global insights matched with local intelligence from more than 100 countries. By using innovative technologies and data sciences, we turn big data into smart data, enabling its clients to address critical concerns in public policy, health policy and services, epidemiology, environmental protection, political science, sociology, social psychology, and many other fields.
