This Washington Post-ABC News poll was conducted by telephone October 10-13, 2016, among a random national sample of 1,152 adults, including landline and cell phone respondents. Overall results have a margin of sampling error of plus or minus 3 percentage points; the error margin is 3.5 points among the sample of 920 registered voters and four points among the sample of 740 likely voters. Sampling, data collection and tabulation by Abt-SRBI of New York.

*= less than 0.5 percent

(Full methodological details and sampling error margins for subgroups appended at the end.)

1. (ASKED OF REGISTERED VOTERS) How closely are you following the 2016 presidential race: very closely, somewhat closely, not so closely, or not closely at all?

*** END***

METHODOLOGICAL DETAILS

This poll was jointly sponsored and funded by The Washington Post and ABC News. The poll is a random sample of the continental United States, not including Alaska and Hawaii, with interviews in English and Spanish.

This questionnaire was administered with the exact questions in the exact order as they appear in this document. Demographics and religious identity questions are not shown. If a question was asked of a reduced base of the sample, a parenthetical preceding the question identifies the group asked. Phrases surrounded by parentheticals within questions indicate clauses that were randomly rotated for respondents. Results preceded by “RV” indicate results among registered voters. Results preceded by “LV” indicate results among likely voters.

A dual frame landline and cellular phone telephone sample was generated using Random Digit Dialing procedures. Interviewers called landlines and cellular phone numbers, first requesting to speak with the youngest adult male or female at home. The final sample included 403 interviews completed on landlines and 749 interviews completed via cellular phones, including 508 interviews with adults in cell phone-only households.

This survey uses statistical weighting procedures to account for deviations in the survey sample from known population characteristics, which helps correct for differential survey participation and random variation in samples. The overall adult sample is weighted to correct for differential probabilities of selection among individuals who are landline-only, cell phone-only or dual users. Results are also weighted match the demographic makeup of the population by sex, region, age, education and race/ethnicity according to the latest Current Population Survey Social and Economic Supplement by age, race/ethnicity, sex and education.

All error margins have been adjusted to account for the survey’s design effect, which is 1.3 for this survey. The design effect is a factor representing the survey’s deviation from a simple random sample, and takes into account decreases in precision due to sample design and weighting procedures. Surveys that do not incorporate a design effect overstate their precision.

Group	Unweighted sample size	Error margin
All adults	1,152	+/- 3 points
Registered voters	920	3.5
Likely voters	740	4
Half sample	458-461	5

The Washington Post is a charter member of AAPOR’s Transparency Initiative, which recognizes organizations that disclose key methodological details on the research they produce.
