Title: Gallup/EBRI Poll: Public Attitudes on the Value of Benefits

Survey Organizations: Gallup Organization

Sponsors: Employee Benefit Research Institute

Field Dates: September 1 - 30, 1992

Sample: National adult

Sample Size: 1000

Interview Modes: Telephone Interview, Landline

Weight Location: None

Usage Notes: Columns locations are found to the right of the question.

Please note that data provided by the Roper Center for Public Opinion Research may not be re-disseminated without written permission. The results of any analyses conducted on the data may, however, be published with appropriate acknowledgments and source citation.

Introduction

Employee Benefit Research Institute (EBRI) of Washington, D.C., commissioned The Gallup Organization, Inc. of Princeton, New Jersey to conduct a national public opinion study on employee attitudes toward employer-sponsored benefits. EBRI was responsible for suggesting subject areas and Gallup was responsible for ensuring that questions were properly asked and were without bias.

During September 1992, 1,000 Americans age 18 and older across the continental United States were contacted by telephone from randomly generated telephone lists. Random lists eliminate bias against newly listed and unlisted telephone numbers. Gallup uses a three-callback methodology in which up to three calls are made to the same telephone number in order to eliminate bias in favor of those individuals easy to reach by telephone.

As part of Gallup's quality-control procedures, ten percent (10%) of all interviews are checked by supervisory personnel to ensure that data is accurate and properly procured. All interviews are conducted in Gallup's communication facility by professionally trained interviewers under exclusive employment of The Gallup Organization.

The final results presented in this report have been statistically weighted by gender, race, education, age and region to be proportional to the population of individuals age 18-65 across the continental United States.

The maximum expected error range at the 95% confidence level for a study of 1,000 respondents is $\pm$3.1%. Stated more simply, if 100 different samples of 1,000

persons each were randomly chosen from the population, 95 times out of 100 the total results obtained would vary no more than ±3.1 percentage points from the results that would be obtained if the entire population were surveyed. The maximum expected statistical error range at the 95% level of confidence is given in the following table:

EXPECTED ERROR RANGE FOR A MARKET SAMPLE OF 1,000 RESPONDENTS*

Results About:	10%	20%	30%	40%	50%	60%	70%	80%	90%
Error Range:	±1.9	±2.5	±2.8	±3.0	±3.1	±3.0	±2.8	±2.5	±1.9

* At the 95% confidence level
