Title: Los Angeles Times Poll: Sexual Harassment Charges Against Judge Thomas

Survey Organizations: Los Angeles Times

Field Dates: October 12 - 13, 1991

Sample: National adult plus an oversample of Blacks

Sample Size: 1264

Interview Modes: Telephone Interview

Weight Location: Card 1, Columns 74-78 (xx.xxx)

Usage Notes: Some questions, which use only 1 column for data, allow legitimate punches for 10 & 11.
10 will correspond to 'X' in the data file and 11 will correspond to 'Y' in the data file.

Please note that data provided by the Roper Center for Public Opinion Research may not be re-disseminated without written permission. The results of any analyses conducted on the data may, however, be published with appropriate acknowledgments and source citation.

This Los Angeles Times poll is the 261st in a series of opinion studies designed to measure public attitudes on a number of critical issues. This particular survey focuses on the Senate confirmation hearings for U.S. Supreme Court nominee Judge Clarence Thomas regarding the charges of sexual harassment lodged against him.

The sampling frame for this survey is all telephone residences in the nation including the states of Alaska and Hawaii. One thousand two hundred sixty-four men and women 18 years of age or older were contacted by telephone October 12-13, 1991. A total of 606 interviews were conducted on Saturday and 658 on Sunday. Results are adjusted to conform with census figures on characteristics such as sex, race, age, national origin, education and household size. Telephone numbers were generated from a computer list that includes all telephone exchanges in the nation. Random-digit dialing techniques were used to ensure that both listed and unlisted residences have an opportunity to be contacted. Oversampling of blacks provided a larger-sized subsample for analysis, which was then weighted down to its proper share in the nationwide sample.

Readers are reminded that, since survey research normally questions only a small proportion of the population, one must allow a certain margin for error. The study has a margin of sampling error of plus or minus three percentage points. For certain subgroups, the margin of error is somewhat higher.

Surveys of this kind are sometimes subject to different kinds of inaccuracies for which precise estimates cannot be calculated and which may, in some cases, be even larger than the effects associated with sampling procedures. For example, findings may be influenced by events which take place while the survey is in the field and, of course, events occurring since the time the interviews were conducted could have changed the opinions reported here. Undetected flaws in the way the sampling and interviewing procedure were carried out could have a significant effect on the findings. Changing the wording of questions and the sequence in which they are asked can produce different results. Sometimes questions are inadvertently biased or misleading. And people who responded to the survey may not necessarily replicate the views of those who refused to be interviewed or who could not be found at home during the time the survey was conducted. Moreover, while every precaution has been taken to make these findings completely accurate, other errors may have resulted from the various practical difficulties associated with taking any survey of public opinion.

The Los Angeles Times Poll is directed by John Brennan, under the general supervision of Assistant Managing Editor Martin Baron. Susan Pinkus is the assistant director, Roger Richardson is the field supervisor, Jill Milburn is the systems analyst and Claudia Vaughn is the data coordinator.

Further information regarding this study is available by writing to the Los Angeles Times Poll, Times Mirror Square, Los Angeles, California 90053, or by calling (213) 237-7976.

This report conforms to the standards of disclosure of the National Council on Public Polls and the American Association for Public Opinion Research.
