Title: Los Angeles Times Poll #268: National Politics and the State of the Union

Survey Organizations: Los Angeles Times

Field Dates: January 31 - February 3, 1992

Sample: National adult

Sample Size: 1776

Interview Modes: Telephone Interview

Weight Location: Card 2, Columns 61-65 (xx.xxx)

Usage Notes: Some questions, which use only 1 column for data, allow legitimate punches for 10 & 11.
10 will correspond to 'X' in the data file and 11 will correspond to 'Y' in the data file.

Please note that data provided by the Roper Center for Public Opinion Research may not be re-disseminated without written permission. The results of any analyses conducted on the data may, however, be published with appropriate acknowledgments and source citation.

This Los Angeles Times poll is the 268th in a series of opinion studies designed to measure public attitudes on a number of critical issues. This particular survey focuses on national politics, and President Bush's State of the Union address.

The sampling frame for this survey is all telephone residences in the nation including the states of Alaska and Hawaii. One thousand seven hundred seventy-six men and women 18 years of age or older were contacted by telephone January 31 through February 3, 1992. The sample includes 1,424 registered voters, of whom 700 are Democrats or Democratic-leaning independents and 627 who are Republicans or Republican-leaning independents. Results are adjusted to conform with census figures on characteristics such as sex, age, race and national origin, education and household size. Telephone numbers were generated from a computer list that includes all telephone exchanges in the nation. Random-digit dialing techniques were used to ensure that both listed and unlisted residences had an opportunity to be contacted.

Readers are reminded that, since survey research normally questions only a small proportion of the population, one must allow a certain margin for error. The total sample and the total registered voters sample have a margin of sampling error of plus or minus 3 points. For the samples of registered leaned Democrats and Republicans, the error margin is plus or minus 4 points. The error margin for other subgroups may be somewhat higher.

Surveys of this kind are sometimes subject to different kinds of inaccuracies for which precise estimates cannot be calculated and which may, in some cases, be even larger than the effects associated with sampling procedures. For example, findings may be influenced by events which take place while the survey is in the field and, of course, events occurring since the time the interviews were conducted could have changed the opinions reported here. Undetected flaws in the way the sampling and interviewing procedure were carried out could have a significant effect on the findings. Changing the wording of questions and the sequence in which they are asked can produce different results. Sometimes questions are inadvertently biased or misleading. And people who responded to the survey may not necessarily replicate the views of those who refused to be interviewed or who could not be found at home during the time the survey was conducted. Moreover, while every precaution has been taken to make these findings completely accurate, other errors may have resulted from the various practical difficulties associated with taking any survey of public opinion.

The Los Angeles Times Poll is directed by John Brennan, under the general supervision of Assistant Managing Editor Martin Baron. Susan Pinkus is the assistant director, Roger Richardson is the field supervisor, Jill Milburn is the systems analyst and Claudia Vaughn is the data coordinator.

Further information regarding this study is available by writing to the Los Angeles Times Poll, Times Mirror Square, Los Angeles, California 90053, or by calling (213) 237-7976.

This report conforms to the standards of disclosure of the National Council on Public Polls and the American Association for Public Opinion Research.
