Country: United States

Title: Los Angeles Times Poll #287: California Businesses

Survey Organizations: Los Angeles Times

Field Dates: June 19 - July 31, 1992

Sample: Vice Presidents and above-level executives at 735 businesses in the San Fernando Valley, Burbank and Glendale.

Sample Size: 735

Interview Modes: Mail questionnaire/Self-enumerated questionnaire

Weight Location: None

Usage Notes: Some questions, which use only 1 column for data, allow legitimate punches for 10 & 11.
10 will correspond to 'X' in the data file and 11 will correspond to 'Y' in the data file.

Please note that data provided by the Roper Center for Public Opinion Research may not be re-disseminated without written permission. The results of any analyses conducted on the data may, however, be published with appropriate acknowledgments and source citation.

This Los Angeles Times poll is the 287th in a series of opinion studies designed to measure public attitudes on a number of critical issues. This particular survey focuses on the business climate in the San Fernando Valley, Burbank and Glendale.

The sampling frame for this survey was selected from the 1992 Southern California Business Directory and Buyers Guide, a database sponsored by the Los Angeles Chamber of Commerce. This database contains updated classification information on thousands of companies in Southern California. The sample was chosen so as to provide a fair cross-section of San Fernando Valley, Burbank and Glendale businesses by size, type and geography, with an effort made to include as many of the area's larger businesses (those with 100 employees or more) as possible. Results are based on responses from vice presidents and above-level executives at 735 businesses obtained from June 19 to July 31, 1992.

The initial phase of the study involved mailing questionnaires to executives at all designated firms with a request that the respondent fill out and return the ballot at his or her convenience. If no response was forthcoming after a stipulated period of time, follow-up telephone calls were then utilized to investigate non-response and to boost cooperation.

Of the original 1,114 firms targeted, 55 were never located or were found to be out of business - these were dropped from the sample. Of the remaining 1,059, 278 declined to participate while 46 could not be contacted. So the 735 completed surveys represents a return of 66% of the original 1,114 targeted firms.

Three hundred and forty-two of the businesses responding (47% of the sample) have less than 25 full-time employees on staff, while 196 (27%) have between 25 and 99 staffers and 185 (26%) have rosters of 100 or more. Forty-three percent of the firms are service industries, while 32% are in manufacturing and the rest break down as follows: 6% each in finance/insurance/real estate and retail trade, 5% in wholesale trade, 4% in transportation/utilities, 3% in construction and 1% in agriculture/forestry.

Revenue-wise, 31% of the firms post annual revenues under $1M, 28% $1M to $5M, 26% over $5M to $25M and 15% had revenues over $25M. Thirty-seven percent of the firms were established over 30 years ago while half (49%) were founded from 11 to 30 years ago and 14% are less than 10 years old.

Surveys of this kind are sometimes subject to different kinds of inaccuracies for which precise estimates cannot be calculated and which may, in some cases, be even larger than the effects associated with sampling procedures. For example, findings may be influenced by events which take place while the survey is in the field and, of course, events occurring since the time the interviews were conducted could have changed the opinions reported here. Undetected flaws in the way the sampling and interviewing procedure were carried out could have a significant effect on the findings. Changing the wording of questions and the sequence in which they are asked can produce different results. Sometimes questions are inadvertently biased or misleading. And people who responded to the survey may not necessarily replicate the views of those who refused to be interviewed or who could not be found at home during the time the survey was conducted. Moreover, while every precaution has been taken to make these findings completely accurate, other errors may have resulted from the various practical difficulties associated with taking any survey of public opinion.

The Los Angeles Times Poll is directed by John Brennan, under the general supervision of Assistant Managing Editor Martin Baron. Susan Pinkus is the assistant director, Roger Richardson is the field supervisor, Jill Milburn is the systems analyst and Claudia Vaughn is the data coordinator.

Further information regarding this study is available by writing to the Los Angeles Times Poll, Times Mirror Square, Los Angeles, California 90053, or by calling (213) 237-2027.

This report conforms to the standards of disclosure of the National Council on Public Polls and the American Association for Public Opinion Research.
