Title: Times Mirror Poll # 1991-PS1091: Political Survey I

Survey Organizations: Princeton Survey Research Associates

Sponsors: Times Mirror Center for the People & the Press

Field Dates: October 31 - November 10, 1991

Sample: National adult

Sample Size: 2020

Interview Modes: Telephone Interview

Weight Location: Columns 250-252 (x.xx)

Please note that data provided by the Roper Center for Public Opinion Research may not be re-disseminated without written permission. The results of any analyses conducted on the data may, however, be published with appropriate acknowledgments and source citation.

SURVEY METHODOLOGY

The survey results are based on telephone interviews conducted among a nationally representative sample of 2,020 adults, 18 years of age or older, during the period of October 31 - November 10, 1991. For results based on the total sample, one can say with 95% confidence that the error attributable to sampling and other random effects is plus or minus 2 percentage points.

For the questions that measured preferences for the presidential election the sample was divided into two random halves. 1,010 respondents were asked to choose between George Bush and an unnamed Democrat, while the other half sample was asked to choose between George Bush and Mario Cuomo. The sampling error for results of each question is plus or minus 3 percentage points.

The results of the Democratic nomination question is based upon 868 interviews with Democrats and Independents who say they lean to the Democratic party. The margin of sampling error for these results is plus or minus 4 percentage points

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.
