SURVEY METHODOLOGY

The survey results are based on telephone interviews conducted among a nationally representative sample of 3,517 adults 18 years of age or older, during the period of May 28 - June 10, 1992. The survey oversampled African-Americans and young people aged 18 to 34. These oversamples were included to ensure a sufficient number of interviews to allow separate analysis of these subpopulations.

The sample of telephone numbers was randomly selected in two parts: a national sample of random digit telephone numbers designed to produce a representative sample of the general population, and a national sample of random digit and listed telephone numbers designed to produce a representative sample of the black population living in areas with significant black population. The oversample of young people was obtained by screening a random digit telephone sample for people aged 18 to 34.

The general population sample was a random digit sample of telephone numbers selected from telephone exchanges in the continental United States. The telephone exchanges were selected with probabilities proportional to their size. The first eight digits of the sampled telephone numbers (area code, telephone exchange, bank number) were selected to be proportionally stratified by county and by telephone exchange within county. That is, the number of telephone numbers randomly sampled from within a given county was proportional to that county's share of telephone numbers in the state. Estimates of the number of telephone households within each county are derived from 1990 Census data on residential telephone incidence.

For the African-American supplemental sample telephone numbers were randomly selected from among the listed telephone numbers that are associated with households in census tracts that were at least 30% Black in the 1990 census. The random component of the black sample was constructed by adding "1" to listed telephone numbers selected in identical fashion to the numbers selected for the listed component. Telephone numbers selected as part of the black supplemental sample were screened to determine their eligibility by race. By design the sampling procedures for the supplemental sample of blacks underrepresents blacks living in geographic areas that do not contain concentrations of blacks and blacks living in households with unlisted telephone numbers. The demographic weighting procedures described below mitigate, to a large degree, these limitations of the sample design.

At least four attempts were made to contact each telephone number in the sample. The calls were staggered over times of day and days of the week to maximize the chances of making a contact with a respondent. In addition, all interview breakoffs and refusals were recontacted at least once in order to attempt to convert them to completed interviews.

Non-response in telephone interview surveys produces some known sources of biases in survey derived estimates because participation tends to vary for different subgroups of the population and these subgroups are likely to vary also on questions of substantive interest. For example, young men are more difficult than other adults to reach at home by telephone and people with relatively low educational attainment are less likely than others to agree to participate in telephone surveys.

A more important source of bias in survey estimates for this survey is the explicit over-sampling that was done to increase the representation of blacks and young people. In order to compensate for these known biases, the sample data for this survey are weighted in analysis.

The demographic weighting parameters for this study were derived from a special analysis of the most recently available Census Bureau Annual Demographic File (from the March 1991 Current Population Survey). This analysis produced population parameters for the demographic characteristics of the total adult population of the continental U.S. living in households with telephones and for the adult black population of the continental U.S. living in households with telephones. These population parameters were compared with the sample characteristics to construct sample weights. The black component of the survey was weighted to bring the demographic characteristics of the black sample into alignment with the demographic characteristics of the national adult black population. The demographic distributions used in the weighting included sex by age, sex by education, age by education, race, region, and residence in metropolitan versus non-metropolitan areas. Due to the design of the black oversample, blacks living in less densely populated areas (in terms of black population) were underrepresented. This underrepresentation was corrected with the metropolitan component of the weighting scheme. In addition, the black sample and the sample of people 18 to 34 years of age were weighted to their correct proportion in the total sample of adults.

For results based on the total sample, one can say with 95% confidence that the error attributable to sampling and other random effects is plus or minus 2 percentage points. For

results based on the black sample, one can say with 95% confidence that the error attributable to sampling and other random effects is plus or minus 6 percentage points.

A split ballot technique was used to test Norman Schwartzkopf's appeal versus Ross Perot's. A random subset of 2512 respondents were questioned about Perot as a third party candidate while a random subset of 1005 were asked about Schwartzkopf.

A second independent nationwide telephone survey was conducted among 1004 adults 18 years of age and older during the period June 5-9, 1992 as a means of testing an alternative voting intentions method.

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.

INTRODUCTION: Hello, I am _____ calling for the Princeton Survey Research Associates from Princeton, New Jersey. We are conducting a telephone opinion survey for leading newspapers and tv stations around the country. I'd like to ask a few questions of the youngest male, 18 years of age or older, who is now at home (IF NO MALE, ASK: May I please speak with the oldest female, 18 years of age or older, who is now at home?)

FIRST QUESTION IS...

Q.1 Do you approve or disapprove of the way George Bush is handling his job as President?

1 Approve
2 Disapprove
3 Don't know

ON ANOTHER SUBJECT...

Q.2 Do you happen to read any daily newspaper or newspapers regularly?

1 Yes
2 No
3 Don't know

Q.3 Do you happen to watch any TV news programs regularly, or not ?

1 Yes
2 No
3 Don't know

Q.4 Do you listen to the news on the radio regularly or not?

1 Yes
2 No
3 Don't know

Q4A. Have you heard or read about the possibility that Texas businessman Ross Perot may run as an independant candidate for President?

1 Yes
2 No
3 Don't know

Q.5 How much thought have you given to the coming Presidential election, quite a lot or only a little?

1 Quite a lot
2 Some (VOL)
3 Little
4 None
5 Can't say

Q.6 Suppose the 1992 Presidential election were being held today. If George Bush were the Republican candidate and Arkansas Governor Bill Clinton were the Democratic candidate who would you like to see win?

1 George Bush GO TO Q.7
2 Bill Clinton GO TO Q.7
3 (DO NOT READ) Other GO TO Q.8
4 (DO NOT READ) Undecided GO TO Q.8

IF RESPONDENT ANSWERED '1' GEORGE BUSH OR '2' BILL CLINTON IN Q.6 ASK:
7 Do you support (INSERT CHOICE FROM Q.6) strongly or only moderately?

1 Strongly GO TO Q.9
2 Moderately GO TO Q.9
3 Can't say GO TO Q.9

IF RESPONDENT ANSWERED '3' OTHER OR '4' UNDECIDED IN Q.6 ASK:
Q.8 As of today, do you lean more to George Bush, the Republican or do you lean more to Bill Clinton the Democrat?

1 George Bush
2 Bill Clinton
3 (DO NOT READ) Other
