Title: VRS State Primary Exit Poll: New Jersey Democratic Primary

Survey Organizations: Voter Research & Surveys

Sponsors: ABC News; CBS News; NBC News; CNN

Field Dates: June 2, 1992

Sample: Registered Voters Leaving Voting Booths in New Jersey

Sample Size: 906

Interview Modes: Mail questionnaire/Self-enumerated questionnaire

Weight Location: Columns 75-80 (xxx.xxx)

Usage Notes: Read all documentation before running data. A blank always represents an omit or non-response. Numerical values for the PRECINCT variable do not correspond with actual precinct numbers. Data labels for this variable have been removed to ensure respondent confidentiality.

Please note that data provided by the Roper Center for Public Opinion Research may not be re-disseminated without written permission. The results of any analyses conducted on the data may, however, be published with appropriate acknowledgments and source citation.

Voter Research & Surveys State Primary Poll Usage Notes:

Weights
Columns 75-80 contain the respondent weights. These weights should be applied in all analyses. The weight has 3 implied decimal places, where '164222' in columns 75-80 means the respondent's weights=164.222

For additional information, see the weighting section in the addendum on sampling procedures.

Backside Variables
When Column 66=1, there is at least one response on the backside of the questionnaire, which indicates that the questionnaire was turned over. This could allow the researcher to omit respondents when analyzing backside items

Additional Items
Some items, not on the questionnaire, are added to the datasets. All surveys have the following add-ons:

Column Location	Description
65	State or National Questionnaire: 1=National 2=State
66	Completed Backside of Exit Poll (where appropriate): 1=Yes 2=No
68	Age (4 Categories) 1=18-29 3=45-59 2=30-44 4=60 and Over
69	Age (Categories): 1=18-29 2=30-39 3=40-49 4=50-59 5=60 and Over

The various ages (Cols. 68, 69) are regroupings of the original 6 category Age question in Column 19.

70	Party ID: (3 Categories)	
		1=Democrat
		2=Republican
		3=Independent/Else

Party ID is a regrouping of the 4 category Party ID in column 48.

*72	# of responses to the Issues question:	
	1, 2, or Blank	

*Only in states with survey asking which issues mattered most

*73	# of responses to the Quality question:	
	1, 2, or Blank	

* Only in states with survey asking which quality mattered most

75-80	Weight	(3 implied decimals)

17	Call Number	1- First Call
		2- Second Call
		3- Third Call

Interviewers called in results three times during election day. Call number indicates from which call a respondent came.

*71	Political Phil	1= Liberal
		2= Moderate
		3= Conservative

This is a regrouping of the five-category Philosophy variable in column 49

Blanks

A blank always represents an-omit, or non-response to an item. However, there are two exceptions.

1) On checklist-type questions, such as "do any of the following apply to you?" or "Were any of the items below very important in your presidential choice?", each of the listed items are coded '1' if they are checked and "blank" if not checked.

Add-on items

Column Location	Description
67	Geo Code (2 to 5 categories):
	VRS geographic region within a state
	(See column location documentation for codes)

Addendum

Sample Selection – The state samples were selected in two stages. First, a probability sample of voting precincts was selected that represented the different geographic areas across the state and the vote by party. Precincts were selected with a probability proportionate to the number of voters in each precinct. Each voter in the state has the same chance to have his or her precinct selected. .There is one exception. In some states, precincts that have large minority populations have been sampled at a higher rate than other precincts. The sample weighting (described below) adjusts the representation of theses precincts to their correct share of the total vote.

Within state precincts voters were selected systematically throughout the voting day at a rate that gives all voters in a precinct the same chance of being interviewed.

Sampling Error – The error due to sampling depends on, among other things the number of respondents in each group. For example, if there are 1,500 respondents total in a sample, the sampling error on the percentage of men voting for a candidate depends on the number of men in the poll. In this example, if there are 750 men, the table below shows that the sampling error for 750 respondents to a typical question is 5.0%.

The sampling errors below are for most voter groups. There are 95 chances in 100 that a sample result is within this many percentage points of the result that would have been obtained by trying to interview every voter.

The sampling error also depends on how many precincts have voters with the characteristic of interest. For example, black or high income voters may be found clustered in only a few sample Precincts. A characteristic that is clustered in a few precincts has a larger sampling error than characteristics that are not clustered such as age or sex. The sampling error may be up to 3 times larger for clustered characteristics.

Respondents in base of percentage	Error due to sampling
100	13.0%
250	8.0
500	6.0
750	5.0
1,000	4.0
1,500	3.5
2,000	3.0
2,500	2.5
5,000	2.0
7,500	1.5
10,000	1.3
12,500	1.1
15,000	1.1

Weighting – the tabulated results are weighted to reflect the different probabilities of selecting a precinct and of selecting a voter within each precinct. Minority precincts, that were selected at a higher rate, received a smaller weight than other precincts of the same size. For voters who are missed or refuse to be interviewed, there also is an adjustment which is based on their observed age, race and sex. Tabulations are meaningful only if they are weighted. Unweighted tabulations will make no sense.

Questionnaires – The questionnaires in each state differ somewhat. There are eight questions common to all states: age, sex, race, income, vote for president in 1988, party identification, condition of national economy, and personal financial situation. There are additional questions in each state.

State tabulations can have questions based on different sample sizes. If a question appears only on a state exit poll questionnaire, it will have a smaller sample size than will questions that are on both the state and the national questionnaire used in that state. The sample sizes on the top of the state exit poll documentation are the total sample sizes for the state and national questionnaire combined.
